

## **Forage Based Diet**

- Feed one flake of alfalfa hay twice daily to substitute for the grain ration.
- Flake should be at least 3 inches to 6 inches in width.
- Feed adequate amounts of coastal hay at least twice daily.
- Hay should constitute at least 1 % of body weight. For example a 1200 lb. horse would require 12 lbs of hay total a day.
- Horse should be fed 1 lb of Ultium feed with supplements, to include Platinum Performance, one to two times daily.
- It is not necessary to gradually reduce grain diet when converting to this feeding program.
